

Integration of traditional and new data sources and technologies: from censuses to big data

Tuesday, 12 April 2016 (12:00 pm – 1:00 pm)

United Nations Headquarters, Conference room 4, Conference Building

Given the breadth and interlinkages between the Sustainable Development Goals, data from different sources are often needed to devise appropriate interventions and to increase their effectiveness. This session will highlight the usefulness of integrating data from various sources, from traditional official statistics to big data, using geo-referencing and new information technologies.

Professor, University of Southampton
