COMMISSION ON POPULATI ON AND DEVELOPMENT FORTY-SIXTH SESSION NEW TRENDS IN MIGRATION: DEMOGRAPHIC ASPECTS E/CN.9/2013/3 REPORT OF THE SECRETARY-GENERAL

FRANCESCA PERUCCI POPULATION DIVISION/DESA 22 APRIL 2013

Mr. Chairman,
Distinguished delegates,
Ladies and gentleman,

It is my pleasure to introduce the report of the Secretary receal entitled "New Trends in Migration: Demographic Assects" (E/CN.9/2012/4). The reptopresents an overview of trends in migration, examines some of desmographic aspects a distrusses policies to enhance the benefits of migration while dressing its challenges. The report also provides recommendations for actions to protenthe integration of migrants and to enhance the contribution of migration to releptment, which in turn contribute to achieving the goals and objectives of the gramme of Action of the International Conference on Population and Development.

Although the percentage international migrants ithe global population has changed only slightly over the past 20 years, the reproducts major changes in the size, direction and complexity of migration. Since 1990, nation patterns have become increasingly diverse. Most countries are nowncurrently countries of ion, destination and transit. Also, differences across regions in the stocknown migrantas a percentage of total population have continued widen. The increase was more rapid in the developed regions, with Europe and North America each more international migrants than the other four regions combined. As a residle 2000 Europe surpassed Asia as the area hosting the largest number ion ternational migrants.

The report also highlights how people ieassingly move across regions, while the percentage of migrants money within the same region decarsed. This was the case in the African region, in Europe and North Amora in contrast, in Asia, Latin America and

the Cariblean, and Oceania, the percentagenigrants moving outside the region decreased.

Ladies and gentlemen,

Despite the increased diversification of naitory flows, international migration remains highly concentrated. In 2010, of the 214 millionternational migrants worldwide, 50 million (almost one in four) were living in North America and 70 million (one in three) were in Europe.

Yet, new countries have emerged as imprortestinations. Rapidly growing economies in East and South-East As aouth America and West Africa have become new poles of attraction for migrants within their respective regions.

Moreover, the year 2011 saw the highrest in more than a decade of newly displaced people: over 800,000. At the en@@f1, the global number of refugees and asylum seekers reached an estimated 15li@mpersons. But durable solutions for refugees are increasinglyibe implemented, including repetition, local integration and resettlement in third countries. In 20 more than 500,000 refugees were able to repatriate —more than twice as many as in 2010.

Ladies and gentlemen,

The report also notes how the 2008-2009 economic financial crises caused a decline in immigration in several Europeanum tries. With the world economy continuing through a path of recovery through weak, immigration in some these countries rose again in 2011.

Turning to the demographic impact of mitigora, the report notes how net migration, has increasingly represented anpirortant component of overall achge in population size for many countries, especially those in the depet regions. In Europe, for instance, where the number of deaths has exceeded the number that since the late 1990s, positive net migration has offset population decline.

Mr. Chairman,

Allow me now to turn to recent trendsinternal migration. Producing internationally comparable data on internal migration is idult, mainly because of the diversity of geographical scales across whireoves are recorded in diffent countries. Despite these limitations, national data sets clearly showgenumbers of migrants moving within the borders of their country. In 2010, in Chialone, 221 million people, or roughly 17 per cent of the country's total populan, were residing in an area different from where they were officially registered. About 150 millin of them were from rural areas. Rural-to-urban migration is an important factor of population redistribution, including urbanization, although the relative ontribution of internating ration to urban growth (versus natural increase) has changed overaimdevaries across countries and regions. Growing urbanisation, driven bothy migration and natural cinease, requires a balanced approach that includes sustable urban planning while regnizing the important role played by rural communities in theorem ic development of many countries. Governments are increasingly addressing issues related to the spatial distribution of their population. Among countries with available to in 2011, 79 per cent had policies to lessen rural-to-urban migration, increase from 70 per cent in 2005.

Ladies and gentlemen,

More women are migrating on their own or as heads of households than before. This is evident in some countries of South and Socialist Asia, where over 70 per cent of labour emigration permits are allocated to women while migration can represent an opportunity for economic empowerment, naight women also face risks that require gender sensitivity in the formation of policies and interveions related to migration, and to labour migration in particular.

The report also notes that more than 80 quent of trafficked human beings are women—and 16 per cent of those are under 180 Schorder human trafficking and migrant smuggling affect nearly all countries. As September 2012, 152 countries had ratified the 2000 Protocol to Prevent, Suppress aunds Trafficking in Persons, Especially Women and Children, while 134 countries matified the 2000 Protocol against the Smuggling of Migrants by Land, Sea and Air.

Mr. Chairman,

Governments in producing and analysing migration data, guided by internationally agreed standards and recommendations and confidentiality and data protection.

Mr. Chairman,

Ladies and gentlemen,

Over the last few months, the debatethe content and format of the post-2015 development agenda has repeatedly strets in portance of considering migration issues in the new development framework recent report of thus system-wide task team, *Realizing the Future We Want for All*, identifies migration as one of the important
